

Corner Blocks with Nylon Rollers

Corner Blocks with One Row of Aluminum Rollers
Aluminum rollers reduce friction, preventing potential heat build up and damage to synthetic rollers.

Nylon axle bushings provide easier swivel and longer axle life.
Adjustable keeper arm holds cable in place as it is pulled through corner block.

Corner Blocks

Available in 60 and 90 degree models, Jameson corner blocks evenly distribute pressure on coax or fiber cable when pulling around corners. They feature steel side plates with a straight base that acts as a strut for increased strength.

The 60 degree model offers more versatility than the standard 45 degree blocks with the majority of system designs.

For greater options, steel side plates can be replaced in the field and all Jameson corner blocks are interchangeable with alternative set-up brackets.

Component parts for 60 and 90 degree blocks are fully interchangeable.

Corner Block - Nylon Rollers	90 Degree	60 Degree
Corner Block - Single	80-591	80-161
Corner Block - Dual	80-592	80-162
Corner Block - Quad	80-594	80-164
Corner Block - 1 Row Aluminum Rollers		
Corner Block - Single	80-591A	80-161-A
Corner Block - Dual	80-592A	80-162-A
Corner Block - Quad	80-594A	80-164-A
