

## Non-Invasive Detectable Rodders

After 28 years of successful experience manufacturing conduit rodders, Jameson has responded to numerous requests to design a durable and competitively priced line of detectable rodders.

Utilizing the robust frame and reel construction our customers have come to depend on, the Duct Hunter™ incorporates a copper trace wire in the rod for locating and tracing underground conduit or pipe without digging or trenching.

- Trace to depths up to 10'
- Locate sewer laterals
- Rigid frame and wheel construction
- Rod ferrule attaches to sonde, roller guide or pulling eye
- Accessory kit included
- Bend Radius: 5/16" Rod 6" Bend; 7/16" Rod 9" Bend

Attach alligator clip from standard field transmitter to Duct Hunter rod bolt. Attach the other transmitter clip to ground spike.

The copper wire is energized with an electromagnetic signal detectable above ground with a hand-held signal receiver.
