

## Innovative Design For Rugged Dependability

Jameson was the first lighting manufacturer to incorporate electronic ballast technology into portable fluorescent drop lights. This innovation eliminated the need for cumbersome starter canisters, significantly reduced heat output and provided flicker free lighting that will not interfere with tone test equipment. Additionally, this technology greatly prolongs the performance life of the power supply.

Uniquely designed handles and end caps, combined with our patented bulb socket technology, provides superior impact resistance. The shatterproof, protective tube shield further protects the lamp, resulting in the most dependable and durable line of work lights available.
