

Set Up Brackets

Jameson's unique set-up bracket system utilizes a corner block and standard hardware. The bracket has an open side that allows the corner block and cable to be placed independently, after the bracket is attached to the strand, for fast and efficient set up.

Can be attached to strand with standard 3-bolt suspension clamp pole-mount hardware.

Available in three sizes to accommodate single, dual and quad blocks.

70-301
For Single Row

For Single Row Corner Block	70-301
For Dual Row Corner Block	70-302
For Quad Row Corner Block	70-304

Pole mount hardware not included and is not available from Jameson.

Pole Mount Brackets

Designed to save vertical space on crowded joint occupied poles, brackets are ideal for mounting single, dual or quad corner blocks on the pole.

Innovative nylon strap and ratchet make Jameson pole-mount brackets easy to use. Bracket base is contoured to fit pole for maximum stability.

Ratchet strap will not damage existing cables and weighs less than chain straps. Can be adjusted to work from right or left hand side for convenient operation.
