

## Splicer Tools

Jameson remains the leading provider of splicer snips and knives to the telecommunications market.

Our commitment to the highest standards of durability and quality includes a cryogenic (ice tempering) process used on every snip and knife we produce. This process, commonly used in the manufacture of surgical instruments, significantly improves wear resistance. This feature is indispensable when working with kevlar or fiber optic strands and cables.

With a comprehensive line of pouches, a patented ergonomic handle and accessories, Jameson meets all your needs for cable splicing.
