

STRING LIGHT

FLUORESCENT STRINGABLE SHELTER LIGHTS

Durable Design

Patented floating lamp sockets protect the lamp from impact, extending lamp life. This durability is reinforced with a shatterproof, protective tube shield and twin lamp design.

Electronic Efficiency

Using electronic ballast technology, Jameson lights are more efficient and lighter weight than magnetic ballast lights that use cumbersome fuses and unreliable starter canisters. Our lights are flicker free with no excessive heat build up.

Jameson lights will not tax field generators while providing a brighter light.

Compact Style

Half the length and weight of older models, our lights are built for easy transport and one-man set up.

Multiple Applications

Jameson offers a variety of models for different applications: EMI protected, general purpose and energy efficient LED shelter lights.

String Lights are available in case/light kits, multi-voltage and with country specific electrical plugs.

JAMESON'S LIGHT IS LESS THAN HALF THE LENGTH AND WEIGHT OF OLDER MODELS, YET IT IS FOUR TIMES BRIGHTER AND MORE DURABLE
