

## FIELD HOSPITAL LIGHTING

### Compact Precision Lighting

The PAXLight® is compact and lightweight, yet has the rugged engineering and precision lighting required for field hospitals.

Sand and splash resistant, the PAXLight®'s locking joints make it fully adaptable and secure.

### LED Technology

The LED lamps offer an intense light that is five times brighter than traditional halogen field lights. Yet they are cool to the touch, project no heat on patient and have an exceptionally long life.

### Three Pod Design

The patented 3-pod head design eliminates the shadow interference common with single point light sources.

### Multiple Applications

Jameson's PAXLight® is available in 36" and 18" focal length models with multiple mounting options.

36" Focal Length - Field Surgical and Trauma Applications

18" Focal Length - Dental Applications

### PAXLight® Performance Characteristics

**Input Voltage:**

100-240 VAC, 50-60 Hz

**Maximum Current Draw:**

0.75A at 120VAC

0.42A at 230VAC

**Color Temperature:**

Setting A - warm white color at 3300-3600K

Setting B - cool white color at 3800-4000K

**EMI Protection** Certified To IEC 60601-1-2,

Group1, Class A Medical Equipment

**Operating Temperature:**

0-48°C (32-120°F)

**Power Cable:**

300V, SJT, -40 Degree C Rating

**Plug: Hospital Grade**

Over 5X Brighter Than Traditional Halogen Field Hospital Lights
